 New nucleic acid encoding human DnaJ-like proteins - for diagnosis, treatment and prevention of cancer, immune disorders and inflammation claim 22; F1g 3A-D; 73pp; English.

This represents a human DnaJ-like protein, HSpJ2. The invention proves two human DnaJ-like proteins which are heat shock proteins J1 and J3 (HSpJ1 and HSpJ2) and nucleic acid sequences encoding the proteins. cells containing a vector comprising the nucleic acids are used for

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           production of recombinant proteins. Recombinant HSPJ1 and HSPJ2 are used to raise Ab, therapeutically and to screen for specific binding agents. C Antagonists are used to treat or prevent a wide variety of solid cancers, cleukaemia and lymphoma; immune disorders (typical of many disclosed are acquired immune deficiency syndrome, allergy, asthma, Crohn's disease, c diabetes mellitus, multiple sclerosis, rheumatoid arthritis, microbial and parasitic infections) and inflammation. Agonists may be used to treat c prevent tissue damage, e.g. in cases of ankylosing spondylitis, heart attack, ischaemia, UV exposure, insulin-dependent diabetes and for wound c healing, and may be expressed from a vector containing the nucleic acids. Fragments of the nucleic acids are used as primers and probes for detecting and quantifying the HSPV-encoding nucleic acid in usual c hybridisation and/or amplification assays, therapeutically as antisense, c triplex-forming or ribozyme molecules, and for chromosome mapping.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Query Ma

New isolated Helicobacter polynucleotides - used to develop product for the diagnosis, prevention and treatment of Helicobacter infections and gastrointestinal diseases Claim 8; Page 853-855; 2054pp; English.

This sequence represents a Helicobacter pylori GHPO protein of the invention. The polypeptides can be used for preventing or treating the invention. The polypeptides can be used for preventing or treating invention.
                                                                                                                                                                                                                                           (HUMA-) HUMAN GENOME SCI INC.

    I specific promoters, partic. for control of antifungal and insecticide genes

S Example 1; Fig 2A-B; 26pp; English.

C This polypeptide sequence is encoded by the maize DnaJ-related gene (see T8430). DnaJ-related proteins assist in chaperone-mediated protein folding and provide cell viability at high temperatures. They are also involved in DNA replication, translation and peptide translocation across intracellular membranes. Due to this wide range of functions, DnaJ has a wide range of effectiveness and the gene spromoter sequence, ZmDJI (see T84329), is effective in a wide range of tissues. The claimed ZmDJI promoter can be used in claimed methods for control of antifungal or insecticidal genes in transgenic plants.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Query Ma

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ρy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Š
                                                                                                                                                                                                                                                                                                                                                                                                                                                          CC The present invention describes the maize ZMDJI control sequence. Also control sequence linked to a heterologous protein coding sequence: ZMDJI control sequence linked to a heterologous protein coding sequence: CC (2) a monocotyledonous plant, plant part or plant cell modified to control sequence which retain transcription-initiating activity and/or CC contain the expression system; (3) DNA comprising fragments of the ZMDJI control sequence which retain transcription-initiating activity and/or CC the function of the leader sequence; and (4) a method to regulate the cc expression of a gene under control of the ZMDJI control sequence in CC plant cell, plant parts or plants, where the plant is a monocotyledon, CC comprising modifying the cell, part or plant containing the gene under CC control of the ZMDJI control sequence to contain the DNA of (3) or RNA CC of the same nucleotide sequence. Expression systems as described above in which the heterologous sequence encodes an insecticidal or antifungal CC insects (e.g. European corn borer) or fingi (e.g. Ostrinia nubilalis). CC The control sequence comprises a constitutive promoter that directs transgene expression in various plant tissues, including II-week-old CC leaf blades, leaf whorls, leaf collars, stalk rind, stalk pith, stalk condes, roots and kernels. The present sequence represents the protein cencoded by a maize DnaJ clone from the present invention.
                                                                                                                                                                                                                                                                                                                                          Query Match

Such a sequence is predicted to have biological activities which would make them suitable for treating, preventing or ameliorating medical conditions in humans and animals, although no supporting data is given. Suggested activities include nutritional activity, cytokine and cell proliferation/differentiation activity, immune stimulating (e.g. as vaccines) or suppressing activity, haemostation activity, chemotactic/chemokinetic activity, haemostatiand thrombolytic activity, receptor/ligand activity, and tumour invasion suppressor activity, and tumour inhibition activity. It is also stated to be useful for gene
             Streptococcus W09640928-A1.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                pri used in the production of a vaccine to treating and preventing
Pri strain-specific Streptococcal infection
PS Example 3; Page 93-94; 156pp; English.

CC This amino acid sequence corresponds to the N-terminal portion of the
CC Streptococcus pneumoniae DnaJ protein. The protein shows a high degree
CC of identity (72% and 51%) to the DnaJ proteins from Lactococcus lactis
CC and E. coli respectively. The sequence encoding this truncated protein
CC was isolated on the same nucleotide sequence that encodes the
CC informent was isolated from a HindIII-partially digested genomic DNA
CC ilbrary using a fragment of the chimaeric gene (773392) corresponding to
CC the sequence encoding the C-terminal 16% amino acids of HSP72. The HSP72
CC protein and its fragment, or antibodies specific to HSP72, are used in
CC pharmaceutical compositions, pref. a vaccine, for treating or preventing
CC infection by S. pneumoniae or related bacteria in humans, e.g.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  a nucleic acid molecule (NAM). The method comprises: (a) contacting a biological sample isolated from a subject with an agent that specifically binds to the NAM, an expression product or a fragment of an expression product complexed with an HLA molecule; and (b) determining the interaction between the agent and the NAM or the expression product as a determination of the disorder. The products and methods can be used in the diagnosts, monitoring, research, or treatment of conditions characterised by the expression of various cancer associated antigens. The invention provides nucleic acid sequences and encoded polypeptides which are cancer associated antigen precursors expressed in human breast cancer, remal cancer, colon cancer, gastric cancer, prostate cancer and
                                                                                                                                                                         weight disorders, e.g. obesity, cachexia or anorexia nervosa, or a related disorder such as diabetes. The products can also be used to modulate cell cycle progression and apoptosis. They can be used for treating neurodegenerative diseases.

                                                                     identify agents associated with induction of anergy

bisclosure; Fig 2; 3lpp; English.

The sequence represents a mouse cysteine string protein encoded by

a gene isolated from mouse T-cell clones 11.3.7 and 12.2 by a new

procedure for identification of genes associated with anergy. The

protein is expressed in resting T-cells but not in anergic T-cells.

To isolate proteins of this type, differential display is first

performed by generating cDNA from polyA+ mRNA with an oligo-dT

primer with 2 variable anchor nucleotides at the 3'-end, e.g.

Tl1786, using reverse-transcriptase. The resulting cDNA

populations are amplified by the polymerase chain reaction,

populations are amplified by the polymerase chain reaction,

common 4-5 nucleotide sequence combinations, e.g. Tl1785. After

gel electrophoresis of the products, bands unique to anergised or

non-anergised cells are excised, eluted, amplified, cloned and

createned Genes and proteins (and corresponding antibodies)

peptic ulcer disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  This is the amino acid sequence of the bovine P58 protein, a cellular 58 kD protein purified from influenza-infected cells. The protein is used to reduce the accivity of a PKR protein (e.g. W36139) in a screening method for identifying anti-tumour agents by measuring PKR activity in a system before and after adding a test agent, where an increase in PKR activity indicates that the agent is an anti-tumour agent, especially useful for the prevention and/or treatment of neoplasms. PKR is an interferon-inducible cytoplasmic Ser-Thr specific protein kinase which can also be activated by double stranded RNA. PKR is active in cell growth and differentiation by regulating protein synthesis, and thus has been suggested to function as a tumour suppressor.

Recombinant or substantially pure preparations of H. pylori polypeptides are disclosed, together with the nucleic acids encoding them. In all, 97 ORFs are shown. The proteins are variously cell envelope proteins, cytoplasmic proteins, secreted proteins or other cellular proteins. Vaccines containing the nucleic acids or proteins are claimed, as are probes containing at least 8 nucleotides from the nucleic acid sequences. The vaccines are useful for treating or reducing the risk of H. pylori infections, and the probes can be used diagnostically for detecting the presence of Helicobacter in a sample. The products are also of use in screening for compounds having the ability to interfere with the H. pylori life cycle or to inhibit H. pylori infection.

Vaccines containing the nucleic acids or proteins are claimed, as are probes containing at least 8 nucleotides from the nucleic acid sequences. The vaccines are useful for treating or reducing the risk of H. pylori infections, and the probes can be used diagnostically for detecting the presence of Helicobacter in a sample. The products are also of use in screening for compounds having the ability to interfere with the H. pylori life cycle or to inhibit H. pylori infection.
                                                                                                                                                                                       New isolated Helicobacter pylori nucleic acids - used to develop products for the diagnosis, prevention and treatment of infection by H. pylori and other Helicobacter species Claims 37, 41; Page 271-272; 339pp; English.

Recombinant or substantially pure preparations of H. pylori polypeptides are disclosed, together with the nucleic acids encoding them. In all,
                                                                                                                                                                                                                                                                                                                           (ASTR ) ASTRA AB.

CC The present sequence represents a novel human secreted protein deposited CC under accession number AFCC 98026. The secreted protein can be used to CC determine biological activity, to raise antibodies, as tissue markers, CC to isolate cognate ligands or receptors, to identify agents that CC modulate their interactions and as nutritional supplements. It may also have a very wide range of biological activities although no evidence CC clal proliferation/differentiation modulating activity or induction of CC other cytokines; immunostimulating/immunosuppressant activities (e.g. for treating human immunodeficiency virus infection, cancer, autoimmune CC diseases and allergy); regulation of hemanatopolesis (e.g. for treating canamia or as adjunct to chemotherapy); stimulation of growth of bone, CC cartilage, tendons, ligaments and/or nerves (e.g. for treating wounds, CC periodontal disease, neurological diseases stroke, fibrosis); inhibition CC contemplation of follicle stimulating hormone (for control of confections, tumours); haemostatic artivities (e.g. for treating contemplated; for treating septic shock, Crohn's disease); as a claiming contemplated is the use of the corresponding nucleic actid in gene contemplated is the use of the corresponding nucleic actid in gene
procedures.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       1307.2
